                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              disease, thyroid adenoma, hypertension, cardiomyopathy, schizophrenia, major depression, Kaposi's sarcoma and many others tabulated). It is based on identification of agents that reduce receptor activation, rather than compounds that antagonise the normal ligand. Once identified, (inverse) agonists can be used to study OR function. The method does not require knowledge of the endogenous receptor ligand or receptor function, and identifies directly compounds that inhibit the activated receptor, i.e. able to block both ligand-dependent and -independent activation, rather than only the ligand-dependent process, as is the case with compounds identified by ligand-dependent assays. It should accelerate drug discovery at a wide range of OR and since activated receptors have a greater response to the agents, potential drugs are more likely to have a greater response to the agents, potential drugs are more
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       This sequence is a fragment of a fibroblast growth factor 3 receptor mutational cassette. The invention relates to a method for the identification of candidate compounds as agonists, including inverse or partial, of an orphan receptor (OR), which comprises: (i) applying test compound to constitutively active OR; and (ii) measuring its effect on OR. The method is particularly used to identify inverse agonists of
                                                                                                                                                                                              orphan receptor; antithyroid; antidiabetic; neu cytostatic; G protein-coupled receptor agonist.
                                                                                                                                                                                                                                                                     Fibroblast growth factor 3 receptor mutational cassette #1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    OR. The method is particularly used to identify inverse agonists of G protein-coupled OR, i.e. potential therapeutic agents for treating conditions in which constitutively active OR are implicated (e.g. Graves'

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   compound having inverse agonist activity, partial agonist activity or agonist activity to a constitutively active orphan receptor (ORR). The method comprises determining the efficacy of the compound by contacting it with the ORR. A compound identified by the above method having inverse agonist activity to ORR is useful for the treatment of diseases characterised by constitutive activation of the receptor e.g. Graves' disease, male precocious puberty, Jansen's disease, retinitis pigmentosa, hypoparathyroidism, neuropsychiatric diseases, schizophrenia, major depression, and cancerous growth in Kaposi's sarcoma. The method can identify (I) directly without prior knowledge or use of receptor ligands and is useful for accelerating drug discovery at a broad range of ORR. The present sequence represents a fibroblast growth factor 3 receptor mutational cassette, which is used in the exemplification of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            measuring human gene expression in a sample derived from human cervical epithelial cells. By measuring gene expression, the probes are therefore useful in grading and/or staging of diseases of the cervix, notably
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention relates to human single exon nucleic acid probes (SENP: see AAI10068-AAI28459). The present sequence is a peptide encode by one such probe. The SENPs are derived from human HeLa cells. The SEN can be used to produce a single exon microarray, which can be used for
 analyzing

The present invention relates to novel single exon nucleic acid probes (see AAI00010-AAI10067). The present sequence is a peptide encoded by one such probe. The probes are useful for measuring human gene expression in a human breast sample, where the probe hybridises at high stringency to a nucleic acid expressed in the human breast. The probes are useful for predicting, diagnosing, grading, staging, monitoring and prognosing diseases of the human breast, particularly those diseases with polygenic aetiology. The diseases include: breast cancer, disorders of development, inflammatory diseases of the breast, fibrocystic changes, proliferative breast disease and non-carcinoma tumours.

Note: The sequence data for this patent did not form part of the printed

EGF is modified to increase its chemical stability. Its storage life is improved without diminishing its biological activity. The proteins may be prepared by traditional chemical or recombinant means.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published not sammanon

The 5' ESTs were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-dT primed cDNA libraries. Such ESTs are not well suited for isolating cDNA sequences derived from the 5' ends of mRNAs and even in those cases where longer cDNA sequences have been obtained, the full 5' UTR is rarely included. 5' ESTs are derived from mRNAs with intact 5' ends and can therefore be used to obtain full length cDNAs and genomic DNAs. 5' ESTs are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures. They are used to obtain upstream requires commonce and to derive are desired to obtain upstream

                                                                                                                                                                                                                                        RESULT
                                                                                                                                                                                                                                                                                                                                                                                                                                                    sequences; corresponding to human secreted proteins. AAY64651 to AAY65438 represent the EST-related proteins corresponding to AAZ42265 to AAZ43052. The 5' ESTs can be used for producing secreted human gene products. They can be used to identify and isolate 5' untranslated regions (UTRs) and upstream regulatory regions which control the clocation, development stage, rate, and quantity of protein synthesis, as well as stability of mRNA. The ESTs are also useful as probes for chromosome mapping, and to obtain full length cDNA clones. The ESTs can also be used in forensic procedures to identify individuals, or in clasmostic procedures to identify yndividuals, or in clasmostic procedures to identify yndividuals, or in clasmostic procedures to identify shadividuals having genetic diseases resulting from abnormal gene expression. The products may also be used in gene therapy protecols. The nucleic acids encoding signal peptides can be insertion of a polypeptide into a membrane, or importing a polypeptide into a cell. The proteins encoded by the EST sequences may be useful in treating a variety of human conditions. Secreted proteins have called, and the identification of new secreted proteins is valuable. AAZ42249 to AAZ42264 and AAY64644 to AAY64650 represent

                                                                                                                                                                                                                                                                                                    RESULT
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     CC AAH32943 to AAH37195 and AAG73514 to AAG77788 represent human colon CC cancer-associated nucleic acid molecules (N) and proteins (P), where CC the proteins are collectively known as colon cancer antigens. The colon CC cancer antigens have cytostatic activity and can be used in gene CC diagnosis and treatment of diseases associated with inappropriate P CC expression. For example, N and P may be used to treat disorders CC associated with decreased expression by rectifying mutations or deletions CC in a patient's genome that affect the activity of P by expressing CC inactive proteins or to supplement the patients own production of P. CC Additionally, N may be used to produce the colon cancer-associated Ps, CC inserting the nucleic acids into a host cell and culturing the cell color suppression to express the proteins. N and P can be used in the prevention, diagnosis and treatment of colorectal carcinomas and cancers. AAH37196 to AAH37204 CC and AAB7789 represent sequences used in the exemplification of the

Unlike other methods of humanisation, which advocate the replacement of entire antibody framework regions with those of human antibodles, this method involves only the introduction of human residues into those positions not critical for antigen binding. This ensures that the binding properties of the modified antibody

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  light and heavy chain variable domains with low risk amino acid substitutions [i.e. low risk of reducing antigen-binding specificity.] and AAW58480 and AAW58481 are humanised forms of the H65 light and heavy chain variable domains with moderate risk amino acid substitutions and considerate the state of the H65 antibody he3 (ATCC H3 11206). The method is a second to the transfer of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state o
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        AAW58480), and (b) a modified heavy chain variable region (see AAW58479 or AAW58481), where AAW58478 and AAW58479 are humanised forms of the H65
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    A method has been developed of depleting CD5+ cells in an animal. The method comprises administering a cytotoxic protein containing a modified immunoglobulin (Ig) variable domain, where the protein is an anti-CD5 Ig molecule or an immunoconjugate or fusion protein containing an anti-CD5 Ig molecule, and where the modified Ig variable domain comprises at least one of (a) a modified light chain variable region (see AAW58478 or a modified light chain variable region (see AAW58478 or a modified light chain variable region (see AAW58478 or a modified light chain variable region (see AAW58478 or a modified light chain variable region (see AAW58478 or a modified light chain variable region (see AAW58478 or a modified light chain variable region (see AAW58478 or a modified light chain variable region (see AAW58478 or a modified light chain variable region (see AAW58478 or a modified light chain variable region (see AAW58478 or a modified light chain variable region (see AAW58478 or a modified light chain variable region (see AAW58478 or a modified light chain variable region (see AAW58478 or a modified light chain variable region (see AAW58478 or a modified light chain variable region (see AAW58478 or a modified light chain variable region (see AAW58478 or a modified light chain variable region (see AAW58478 or a modified light chain variable region (see AAW58478 or a modified light chain variable region (see AAW58478 or a modified light chain variable region (see AAW58478 or a modified light chain variable region (see AAW58478 or a modified light chain variable region (see AAW58478 or a modified light chain variable region (see AAW58478 or a modified light chain variable region (see AAW58478 or a modified light chain variable region (see AAW58478 or a modified light chain variable region (see AAW58478 or a modified light chain variable region (see AAW58478 or a modified light chain variable region (see AAW58478 or a modified light chain variable region (see AAW58478 or a modified light chain variable region chain vari

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            23-JUN-1998 The 5′ ESTs were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3′ untranslated region (UTR) of the mRNA because they are often obtained from oligo-dT primed cDNA libraries. Such ESTs are not well suited for isolating cDNA sequences derived from the 5′ ends of mRNAs and even in those cases where longer cDNA sequences have been obtained, the full 5′ UTR is rarely included. 5′ ESTs are derived from mRNAs with intact 5′ ends and can therefore be used to obtain full length cDNAs and genomic DNAs. 5′ ESTs are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures. They are used to obtain upstream regulatory sequences and to design expression and secretion vectors.

For example, N and P may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of P by expressing inactive proteins or to supplement the patients own production of P. Additionally, N may be used to produce the colon cancer-associated Ps. by inserting the nucleic acids into a host cell and culturing the cell to express the proteins. N and P can be used in the prevention, diagnosis and treatment of colorectal carcinomas and cancers. AAH37196 to AAH37204 and AAB77789 represent sequences used in the exemplification of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    cancer-associated nucleic acid molecules (N) and proteins (P), where the proteins are collectively known as collon cancer antigens. The colon cancer antigens have cytostatic activity and can be used in gene therapy and vaccine production. N and P may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate P

Biochem., 108, 1990,145-148). Immunogenic peptides (e.g. see AAR72679) were derived from hydrophobicity/flexibility profiles of the published sequence. Peptides containing this sequence can be conjugated to carrier proteins and used to produce antibodies. The antibodies can be used to detect plasma glutathione peroxidase in immunoassays e.g. for detection of selenium deficiency or in diagnosis of certain kidney or liver diseases e.g. graft
                                This sequence represents human plasma glutathione peroxidase H (pGPxH). The invention relates to this movel human glutathione peroxidase, nucleic acid encoding it, and to recombinant production of human pGPxH. The invention also encompasses applications for

Rapamycin-dependent activation of signal transduction fusion

10-OCT-1997 AAW08430;

(first entry)

RESULT 19

```
The present sequence represents the representative construct fusion T6 CC which is involved in the rapamycin-dependent activation of signal CC transduction. This is involved in the construction of transcription CC factor fusion proteins, which in turn are involved in the production of canimal cells containing at least two recombinant DNAs. One DNA should CC encode a chimeric protein which is capable of binding to rapamycin, or a CC rapamycin analogue, and comprises at least one rapamycin binding domain CC (RBD) and at least one protein domain heterologous to it; the second CC recombinant DNA should encode a second chimeric protein which is capable CC first chimeric protein and comprises at least one FKBP:rapamycin binding CC (FRB) domain and at least one domain heterologous to it. Contacting CC those genetically engineered cells with rapamycin or analogues results in the formation of a complex (between the fusion proteins, and the CC activation of an intraccliular signal transduction pathway leading to CC e.g. gene expression or appoletic cell death, gene knock-out, blockade CC of a gene or inhibition of function of a gene product. They are used CC recombinant proteins and viruses.

                                                                                                                                    The present sequence represents a consensus B7RP1 (B7 related protein-1) polypeptide. The specification also describes a CRP1 (CD28 related protein-1) polypeptide. The polypeptides are involved in T-lymphocyte activation, and represent a receptor-ligand pair. CRP1 and B7RP1 are predicted to be a type I transmembrane protein. The nucleic acids are useful for regulating T cell activation or proliferation in an animal. The polypeptides are useful for treating, preventing ameliorating or diagnosing a T-cell mediated disorder in an animal. They can also be used to identify test molecules that bind to the polypeptides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        T cell proliferation; T-cell mediated disorder.

                                                                                                                                                                                                                                                                              The present sequence represents a consensus B7RP1 (B7 related protein-1) polypeptide. The specification also describes a CRP1 (CD28 related protein-1) polypeptide. The polypeptides are involved in T-lymphocyte activation, and represent a receptor-ligand pair. CRP1 and B7RP1 are predicted to be a type I transmembrane protein. The nucleic acids are useful for regulating T cell activation or proliferation in an animal. The polypeptides are useful for treating, preventing ameliorating or diagnosing a T-cell mediated disorder in an animal. They can also be used to identify test molecules that bind to the polypeptides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        WPI;

                                                                                                                                                                                                                                                                                                                                  Oligonucleotide-directed mutagenesis of the wild-type diphtheria gene results in deletion of the codons for Val-147 and active site residue Glu-148. The resulting mutein is not toxic, making it useful in diphtheria vaccines. The risk of reversion to toxicity is much lower for the 147-148 double mutant than for the prior art 148 single mutein, while its immunogenicity is not impaired. The 147-148 mutein opt. has other amino acid residues substd. or deleted, e.g. wild-type His(21) in fragment A. The specification includes the wild-type DT amino acid sequence (see AAR44888) but does not include any mutant sequences; the wild-type sequence was modified according to the description in the claims to give AAR44893.
Cyclomaltodextrin glucanotransferase; CGTase; enzyme; Bacillus circulans;
                           Thermoanaerobacter CGTase variant beta-cyclodextrin #1.

These CGTase mutants have a modified substrate binding and/or product selectivity, compared to this sequence. The mutants are created using primer mutagenesis to modify the gene encoding this sequence. These sequences have greater product selectivity and/or reduced product inhibition (better yields) than wild-type CGTase. These mutant sequences are used to manufacture the final CD types (comprising 6-11 glucose units), or linear 2-12 glucose oligosaccharides, optionally in situ, e.g. during production of baked goods, to stabilise chemicals during their manufacture and in detergents. CD are known for their usefulness in foods, e.g. as a bread-improving agent, to encapsulate/stabilise/solubilise vitamins, dyes, pharmaceuticals, pesticides or fungicides, to bind/remove lipophilic compounds such as cholesterol (e.g. in egg yolk or butter), i plastic laminates, films etc. and to make biodegradable plastics.

complexes with many small hydrophobic molecules. These CGTase mutants have a modified substrate binding and/or product selectivity, compared to this sequence. The mutants are created using primer mutagenesis to modify the gene encoding this sequence. These sequences have greater product selectivity and/or reduced product inhibition (better yields) than wild-type CGTase. These mutant sequences are used to manufacture the 6 main CD types (comprising 6-11 glucose units), or linear 2-12 glucose oligosaccharides, optionally in situ, e.g. during production of baked goods, to stabilise chemicals during their manufacture and in detergents. CD are known for their usefulness in foods, e.g. as a bread-improving agent, to encapsulate/stabilise/solubilise vitamins, dyes, pharmaceuticals, pesticides or fungicides, to bind/remove lipophilic compounds such as cholesterol (e.g. in egg yolk or butter), in plastic laminates, films etc. and to make blodegradable plastics.
